

CompactOxy

THE ULTIMATE COMBAT DIVING DEVICE

Ocean
REBREATHERS

The Compact-Oxy Mini-Rebreather had been designed for combat operations,

engaging diving and
non-breathable
environments

Operations where the soldier must be light, efficiently moving,

quickly reacting in combat and having the best conditions while in the diving mode.

The Israeli Navy tested
the front mounted
mini-rebreathers in the
market.

Non of them
answered
those specific
needs.

It found the Compact-Oxy

as the ultimate Mini-Rebreather for operations of up to 100 minutes diving mode .

As a back mounted device

It gives the best breathing behavior while in the water,

And for the light soldier
the ability to operate
out of the water,

with minimum
disturbance.

With his front free and with only 6 kg weight added to him on the back , comfortably mounted and sheltered by the solid shell ,

the soldier is capable of Climbing, Fighting, Hiding, and appearing as quickly as the situation demands

More than that, the Compact-Oxy is extremely handy for the user and for the technician.
